Credit Licensee Dataset – Help File

1. Purpose

This document is to provide guidance for the Credit Licensee Dataset files uploaded to data.gov.au by ASIC every Thursday.

2. Credit Licensee Register

The Credit Licensee Register file on data.gov.au is a Dataset from ASIC's Credit Licensee Register. This dataset is a point in time snapshot of Credit Licensee data.

The Credit Licensee Register Dataset contains publicly available information for approved and suspended credit licensees. See the data dictionary for fields available in the dataset.

2.1. File Format

The Credit Licensee Dataset is provided in a file with the extension of csv (comma separated values), csv-geo-au, xlsx and tsv.

Note: The Credit Licensee Dataset csv is **not** separated by commas.

The Credit Licensee Dataset csv uses the 'TAB' character as the delimiter (value separator) between values in the dataset; the 'TAB' character is used in place of a comma separator because names can contain commas and therefore are not a suitable delimiter for this dataset. The csv file uses double quote encapsulation around all String datatype variables that contain either a comma (,) or double quote (").

2.2. File interaction

The Credit Licensee Register Dataset contains over 4,000 records.

It is recommended users interact with the dataset on data.gov.au using one of the following methods:

Important note: XLSX file extensions is no longer supported by CKAN as of December 2021 and any information extracted using an API method may not return up to date data. For more information, see the [CKAN website](#).

- Dataset Preview on data.gov.au
- Download the dataset from data.gov.au
- Access resource data via a web API with powerful query support (Web API information can be found in the [main CKAN Data API and DataStore documentation](#)).

2.3. File Import into Excel

To import the file to Excel use the following steps:

1. Open Excel with a new blank workbook.
2. Import data by selecting the 'Data' menu and 'From Text' as the external data source.

3. Choose your file as the data source and select 'Import'.

Credit Licensee Dataset – Help File

4. Import Wizard:
 - a. Select 'Delimited' as the Original data type then select Next.

Text Import Wizard - Step 1 of 3

The Text Wizard has determined that your data is Delimited.

If this is correct, choose Next, or choose the data type that best describes your data.

Original data type

Choose the file type that best describes your data:

☒ Delimited - Characters such as commas or tabs separate each field.

☐ Fixed width - Fields are aligned in columns with spaces between each field.

Start import at row: 1 File origin: MS-DOS (PC-8)
